Spectro | Jet-Care Celebrates 50 Years of Innovation in Engine Health Monitoring at NBAA-BACE 2026

LAS VEGAS, NV, USA – 20 OCTOBER 2026 — Spectro | Jet-Care, a global specialist in laboratory analysis, engine trend monitoring and condition monitoring services, celebrates 50 years of innovation, aviation expertise and trusted customer relationships at NBAA-BACE 2026.

Founded in 1976 by David Glass, Spectro | Jet-Care has grown into an international organisation serving the business aviation, general aviation, MRO, airlines, offshore, medevac, military and law enforcement sectors. Today, its ISO/IEC 17025-accredited laboratories in the United States, United Kingdom and Switzerland deliver accurate, timely analytical data to help customers maintain the reliability, performance and health of mission-critical equipment.

For five decades, the company has supported business aviation operators, aircraft owners, flight departments and maintenance organisations through oil, hydraulic fluid, fuel, filter and debris analysis. These services help identify developing equipment issues, assess component condition and inform maintenance planning, supporting aircraft reliability, availability and operational efficiency while helping minimise unscheduled downtime.

By analysing lubricant condition, wear metals and debris, Spectro | Jet-Care provides actionable insights that complement established maintenance programmes, support troubleshooting and enable better-informed maintenance decisions. Continued investment in scientific expertise, laboratory capabilities and analytical technologies ensures its services evolve alongside increasingly sophisticated aircraft engines and systems.

“Reaching 50 years is an important milestone, but for us it is also an opportunity to look ahead,” said Alan Baker, Sales & Marketing Manager. “Our success has always been built around technical expertise, advanced scientific equipment and the ability to translate accurate, relevant analytical data into practical information for our customers. In business aviation, where aircraft availability, reliability and operational efficiency are essential, condition monitoring plays an important role in supporting effective maintenance decisions. We are proud of what has been achieved over five decades and excited about the opportunities ahead.”

The anniversary also recognises founder David Glass, whose commitment to quality, innovation and customer service established the principles that continue to guide the business.

Celebrating 50 Years at NBAA-BACE 2026

NBAA-BACE provides an opportunity for Spectro | Jet-Care to connect with business aircraft owners and operators, corporate flight departments, manufacturers, maintenance providers and industry partners. The company will highlight its five decades of experience and demonstrate how condition monitoring supports proactive maintenance, informed decision-making and operational reliability.

Visit Spectro | Jet-Care to discover how 50 years of laboratory analysis and condition monitoring expertise can support aircraft engine health, maintenance planning and operational reliability.
