Spectro | Jet-Care enhance their range of sample kits for marine customers

Spectro | Jet-Care, the leading independent laboratory, established in 1976, providing condition monitoring services to the global marine industry, today announced the launch of a number of new kits to assist with the sampling of hydraulic fluids, fuel and fire water mist as part of a regular condition monitoring program.

There are many items on board that use hydraulics and not all are from the same system so each need to be tested accordingly. All will be tested on a scheduled maintenance regime and as such multiple sample bottles are required. The new marine hydraulic case and restock kit provides everything needed for regular sampling.

Periodic monitoring of fuel tanks is fundamental to ensure that fuel cleanliness is maintained at all times and to identify where treatment is needed. The fuel analysis service has been extended to provide three levels of testing.

- | | |
|----------------------------|--|
| A. Basic Fuel Analysis | Water and Microbial |
| B. Essential Fuel Analysis | Water, Microbial, FAME, Sulphur and Flash Point |
| C. Enhanced Fuel Analysis | Water, Microbial, FAME, Sulphur, Flash Point, Viscosity & Density plus Particle Counting |

In addition, the Fire Water Mist Sample Kit is a new analysis service offered by Spectro | Jet-Care to assist with the mandatory quarterly testing of the water quality held in storage tanks. Testing water from the fire suppressant system helps identify elements that may cause disfunction of the system when called to action during a fire.

“Forty-five years experience in marine laboratory analysis not only gives us a huge store of empirical data but long-term relationships with many industry contacts, allowing us to understand the problems and challenges faced when operating a marine vessel,” said Larry Rumbol, Marine Business Development Manager. “Our new kits do just that – by helping to address not only oil but fuel quality, repetitive hydraulic analysis, keeping critical fire suppression systems in working order and a whole lot more. 45 years on Spectro is just as agile and ready to meet the demands of today’s marine industry technology.”

The Company's laboratories are based in the UK, USA and Switzerland and all maintain exacting high standards in terms of quality analysis, supported by the industry recognised accreditation, ISO/IEC 17025:2017, the testing and calibration laboratory standard.

About Spectro | Jet-Care: The Company has been at the forefront of condition monitoring services since 1976. Spectro | Jet-Care offer a comprehensive range of services – Oil, Hydraulic Fluid, Fuel, Coolant, Debris and Filter Analysis – all developed to identify operational issues at the earliest possible stage. With 45 years experience and specialist knowledge their unique partnership approach enables clients to rigorously monitor the condition of equipment - clearly, accurately and efficiently. Spectro | Jet-Care has customers in more than 140 countries. Further information is available at: www.spectro-oil.com
